GENTLEMEN: Your Committee on Buildings and Grounds respectfully re-port that the furnaces her tofore used for heating the Calumet Avenue School building are so worn out as to be worth less for heating purposes, and the building is now without any means to heat and ventilate it during the coming winter.

The important question of the best and most economical method of thoroughly heating this building has engaged the parnest and careful attention of your Committee, and they have arrived at the conclusion that the present style of furnaces in use for heating our school buildings are a failure, both on the buildings are a failure, both on the ground of the results achieved, and the ost of keeping the same in repair.
Your Committee having had their at-

tention directed to the Ruttan s-stem of heating and ventilating large buildings, made a careful examination into the merits of the same, and are of the opin-ion that the Ruttan system offers a practical solution of the difficulties encountered in using the old style furnaces, viz: the impossibility of thoroughly heating a building equally in all its rooms in very cold weather, and the heavy ex-

pense of keeping the furnaces in repair. Your committee therefore recommend the acceptance of the proposal of the Ruttan Manufacturing Company, to put in the Calumet Avenue School building four of their No. 7 Tubular Masonry Furnaces.
